### SUMMARY

Fullstack Web Developer experienced in React with a previous background of a Project Manager in the Game Development industry. With this expertise I know how to organize myself and others to design high-quality products and deliver them on time. Always concerned about consistent and smooth UX being a picky user myself. Not afraid of building the server-side (hello, Node.js + express!) and databases of any type.

### TECHNICAL SKILLS

Javascript, Typescript, React, Redux, Node.js, git, HTML5, CSS, Tailwind, SQL, PostgreSQL, MongoDB

### TECHNICAL PROJECTS

#### Online Therapy Service with a real-time chat - [Github](#) | [Demo](#)

A React App for finding and chatting with a therapist built with Node.js REST API, data stored in Mongo.db database.

- Created REST API with Express.js routers to handle various requests including authentication
- Implemented authentication and token verification with JWT
- Stored data in the non-relational database (Mongo.db) which was connected to server via Mongoose library
- Integrated Socket.io to handle real-time messages exchange
- Styled the app with customized Material UI library and Tailwind

#### Trading center application - [Github](#) | [Demo](#)

A React app trading center with information of current exchange rates and a graph of Silver/Gold Ratio

- Broke down project to separate components and CSS modules to achieve high readability and manageability of code
- Fetched data from 2 different APIs and rendered it to components
- Employed Mock Service Worker (MSW) to imitate API calls during development stage to speed up the process
- Added and configured ChartJS library to create dynamic graph
